

Cable Pulling Winches 20 – 100 kN

Type KW 2000 – KW 3000 – KW 4000 – KW 5000 – KW 10

The sturdy cable pulling winches of this series have proved to be highly reliable in continual service for telecommunication line and electricity supply cable laying projects.

The winches of this series are easy to operate. A single lever ensures jerk-free, infinitely variable rope speed control from 0 to 60 m/min., depending on the type of winch used. This allows the wire rope to be blown into the duct.

The winches are driven by diesel engines via infinitely variable hydrostatic transmissions. The entire pulling force is generated by a twin capstan assembly without undue stress on the wire rope.

The pulling force, together with the length of cable pulled, is recorded by an electronic printer with adjustable pull limiting switch.

The closed, soundproofed body reduces the noise level to a minimum. No troublesome preparatory work is needed, except anchoring the winch, opening the shutter over the operating panel and starting up the engine.

Specifications are subject to change without notice. Output details are depending on use conditions.

Cable Pulling Winches 20 – 100 kN

Type KW 2000 – KW 3000 – KW 4000 – KW 5000 – KW 10

Standard design:

- Chassis with overrunning and automatic reversing brake system, 12 V lighting system and TÜV-approval
- Lockable, soundproofed sheet metal hood
- Electronic diagram recorder with adjustable pull limiting switch
- Electronic meter counter
- Operating hour counter
- Diesel engine with hydrostatic gear system
- Twin capstan system with rope storage drum and 500 m rope
- Painting: traffic red RAL 3020

Extras: (on request)

- other types of engines, painting or rope lengths
- Telescopic deflection boom

Dimensions and weights may differ if extras are fitted.

Technical Data:

-o single-straight

-o single-height-adj.

-oo tandem-straight

-oo tandem-height-adj.

Type	Max. pulling		Drive engine			Rope		Chassis		Length	Width	Height	Weight	Order No.
